It is not possible to make voice calls or send SMS/MMS via the mobile voice/SMS/MMS network using a Mobile Broadband service.

The service is available to eligible new or existing credit approved customers.

The service is available to customers within the Optus 4G/LTE and 3G/HSDPA network coverage areas. When outside the 4G/LTE coverage area (or if your device is not 4G-enabled), the service operates on the Optus 3G/HSDPA network. 4G Mobile Broadband coverage is available in limited areas only.

For use in Australia your device should be compatible with the Optus mobile network frequencies in Australia.

If your device was purchased from another service provider, you should check to ensure that your device is not locked to that service provider or another network.
